

Sid Meka  
Raj Mehta

## LOG

- July 7th
  - Sid and Raj decided on the idea for fitness based app
  - Sid and Raj drafted basic ideas for tables to use for our project
  - Sid and Raj created Github and all shared documents that are required for the project
- July 8th
  - Raj created create table queries for the fitness app
- July 10th
  - Sid figured out how to connect SQL with Java using connector from mysql
- Jul 12th
  - Sid created draft on what pages we would want to use for the final project
- July 13th
  - Sid and Raj create sketches for storyboard for the app (how each page will look → created pencil sketches for basic idea)
- July 16th
  - Raj figured out how to make a class that helps with connection to database for easy query implementation
- Jul 18th
  - Sid started basic GUI pages design on JavaFX w/o implementation to queries or database
  - Raj figured out how to write queries to draw data from mysql while using workbench to help with the process
- July 20th
  - Sid implemented JavaFX buttons to collect information from user filling in the boxes
  - Raj helped created the new users page
- Jul 21st
  - Sid and Raj work on individual pages to draw information from each accordingly
- July 22nd
  - Sid and Raj tarted final review doc and final presentation slides
  - Sid figured out how to smoothly go from tab to tab
- July 23rd
  - Sid and Raj got most if not all the queries working for each page (including insertion into tables)
  - Sid figured out how to add error statements when given wrong / incorrect input
  - Raj cleaned up the GUI to make it look good and presentable with nice font
- July 24th
  - Sid and Raj worked on finishing touches like adding more error catches / cleaning up font
- July 25th

- Sid and Raj finished up presentation, finished up doc, and submitted to github
